About EPrints

- EPrints is developed at the School of Electronics and Computer Science, University of Southampton, UK.
- Open source software and freely available
  - Current version 3.1.1
- Perl and Linux (Windows)
  OAI and Dublin Core
- 269 known archives are running EPrints worldwide.
- Total records in known archives: 519952
- Active User Community
  - EPrints Wiki
  - EPTech-Mailing List
Hi, my name is Christopher Gutteridge and I am the lead developer for EPrints. Meet my team.

EPrints is both a practical tool and the crystallization of a philosophy. It enables research to be accessible to all, and provides the foundation for all academic institutions to create their own research repositories.

EPrints is a great piece of software but we have plans to make it better still. With the new EPrints Community initiative we will be able to work closely with new and existing users to address their needs and concerns, and allow them to help set our priorities. Working towards a more modular design will make it easier for the community to build and share extensions.

I was pleased to recently receive the UK Unix and Open Systems User Group 2005 Award for the development of EPrints.

You can email me at: cgg@ecs.soton.ac.uk

“EPrints is quick to install, easy to configure, and needs minimal maintenance. Once installed, it simply works without fuss. There simply isn’t a contest.”
Arthur Sala, University of Tasmania, 2005

“EPrints is comparatively mature and easier to install, customize and maintain.”
Sukhdev Singh and Naina Pandita, OpenMED@NIC, 2005

“EPrints is the best candidate for a self-configuring solution for institutions wanting to set up and host their own repository.”
Richard Wyles, et al., Open Access Repositories in New Zealand, 2006

EPrints 3 can now be run on a Windows platform - installation instructions on the wiki
Introducing EPrints 3

How do you build on the world’s most popular repository software? Keep innovating. As the first free professional software platform for building high quality OAI-compliant repositories, EPrints is already established as the easiest and fastest way to set up repositories of open access research literature, scientific data, theses, reports and multimedia. EPrints 3 is a major leap forward in functionality, giving even more control and flexibility to repository managers, depositors, researchers and technical administrators.

EPrints 3 is "a significant milestone towards ideal repository software". Report by Peter Millington and William J. Nixon, Ariadne, issue 50, January 2007

Try out the new features of EPrints 3 online with our demonstration repository or see a slideshow PDF of the features of the software.

- **Repository managers**
  - Lower the barrier for your depositors while improving metadata quality and the value of your collection.

- **Depositors**
  - Time saving deposits
  - Import data from other repositories and services
  - Autocomplete-as-you-type for fast data entry

- **Researchers**
  - Optimised for Google Scholar
  - Works with bibliography managers
  - Works with desktop applications and new Web 2.0 services
  - RSS feeds and email alerts keep you up to date

- **Developers**
  - Tightly-managed, quality-controlled code framework
  - Flexible plugin architecture for developing extensions

- **Webmasters**
  - Easily integrate reports, bibliographic listings, author CVs and RSS feeds into your corporate web presence

- **Institutions**
  - High specification repository platform for high visibility, high quality institutional open access collections
  - Conform with research funder open access mandates

A better platform for a high quality repository. Backed by a support team with expertise in the research, library and publishing industries, EPrints 3 is the platform for a variety of open source, bespoke and hosted repository solutions.

Enlighten is the University of Glasgow's institutional repository service for published research material including:

- peer-reviewed journal articles
- published conference papers
- books and book chapters

There are many benefits to depositing your research in Enlighten, find out more...

UNIVERSITY PUBLICATIONS POLICY

At the meeting of Senate on 5th June a new University Publications Policy was approved. The key aim of the new policy is to maximise the impact of the University's research by making publications as widely and freely available as possible through the University's institutional repository Enlighten. The policy will apply from the beginning of the 2008/2009 academic session.

KEY INFORMATION FOR GLASGOW AUTHORS

Enlighten also provides University of Glasgow authors with advice on how to deposit papers in the service and information on related issues such as open access publishing and complying with funding body open access policies.

Some problems in the study of the chronology of the ancient nomadic cultures in Eurasia (9th - 3rd centuries BC)

Publisher's URL: http://www.geochronometria.pl/geo_21.html

Abstract

This research is focused on the chronological investigations of ancient nomads belonging to the Scythian cultures which occupied the steppe and forest-steppe zones of Eurasia during the 9th-3rd centuries BC. The 14C dates for the pre-scythian and early scythian time in both Europe and Asia are presented and compared to their chronological position based on archaeological evidence. The first 14C dates have been produced for the Scythian time monuments located in the Lower Volga River basin, Urals and Transural regions. Their chronological positions are compared with the position of the monuments of Southern Siberia and Central Asia. It was shown that the nomadic cultures belonging to the Scythian culture began to exist over the wide territory of Eurasia from the 9th-8th centuries cal BC and there are some monuments which may be synchronous to the Arzhan royal barrow (the oldest monument known). A list of new 14C dates and a map of the monuments are presented.

Abstract: This research is focused on the chronological investigations of ancient nomads belonging to the Scythian cultures which occupied the steppe and forest-steppe zones of Eurasia during the 9th-3rd centuries BC. The \(^{14}\)C dates for the pre-scythian and early scythian time in both Europe and Asia are presented and compared to their chronological position based on archaeological evidence. The first \(^{14}\)C dates have been produced for the Scythian time monu-
Radiocarbon dates give different chronological ranges (GrA-15860, 2940±50 BP; GrA-15862, 2320±50 BP). GrA-15862 date is in perfect correlation with archaeological evidence. The combined $^{14}$C date 2630±35 BP, calibrated to 832 – 774 cal BC (2$\sigma$) is earlier than the archaeological dating.

The comparison of the radiocarbon age for the Scythian time monuments of the Lower Volga River basin and the Southern Ural regions with the monuments of the Sayan-Altai (the Arzhan and Pazyryk group) presented in Table 1 shows, that the radiocarbon age of these monuments is significantly younger than the Arzhan barrow but closer to the Pazyryk group barrows.

*Southern Siberia and Central Asia (Tuva)*

As mentioned above the oldest monument for all Eurasia is the royal barrow Arzhan (Central Asia and Tuva Republic). In 2000 the first radiocarbon dates were produced for other monuments belonging to the prescythian and early Scythian time.

The most interesting new date has been produced for the monument Tigr-Taizhen barrow 1: 2780±30 BP (Le-5838). It is very important that, according to this date and to the archaeological finds, this barrow is synchronous with the Arzhan barrow and can be dated to the 9th cal BC.

Another interesting monument of the Tagar culture in the Southern Siberia (Minusinsk valley) is the Chereemshino barrow. According to the archaeological classification, this monument dates to the early stage of the Tagar culture. Now the first radiocarbon dates have been produced for this monument from the wooden barrow construction and have been used in the “wiggle matching” method to produce a precise determination of the dates existed in this territory at the same time as the Arzhan barrow.

**4. CONCLUSIONS**

Since the 9th-8th centuries BC the Scythian cultures began to appear on the wide territory of the steppe and forest-steppe zones of Eurasia. Now there are some monuments, which, according to the radiocarbon dates, can be demonstrated to be synchronous to the Arzhan royal barrow. The ages of monuments located in the Lower Volga River basin, the Urals and Transursals regions are more synchronous to the Pazyryk group barrows.

**ACKNOWLEDGEMENTS**

We are very grateful to the staff of the State Hermitage Museum and to the archaeologists from the Chelyabinsk and Ekaterinburg Universities for the samples presented for dating. This research is supported by INTAS, project No 97-20362.

Register

You need to register in order to be able to deposit items in the repository.

As a registered user you will be able to manage your items, up to the point of submitting them for Editorial Review. If the review is successful your item will be deposited in the repository, if it is unsuccessful it will be returned to you with editorial comments.

In addition to managing your items a registered user can set up alert options, so that email notifications are sent when new items are placed in the repository.

Please complete the details on this page to register with Enlighten.

The registration process uses email to send you details of how to activate your account. You must then check your email and activate your password. Once activated you can start to use the registered features of the repository.

If you have already registered but have forgotten your username or password, click here to set a new password.

Item Type

- **Article**
  An article in a journal, magazine, newspaper. Not necessarily peer-reviewed. May be an electronic-only medium, such as an online journal or news website.

- **Book Section**
  A chapter or section in a book.

- **Monograph**
  A monograph. This may be a technical report, project report, documentation, manual, working paper or discussion paper.

- **Conference or Workshop Item**
  A paper, poster, speech, lecture or presentation given at a conference, workshop or other event. If the conference item has been published in a journal or book then please use "Book Section" or "Article" instead.

- **Book**
  A book or a conference volume.

- **Thesis**
  A thesis or dissertation.

- **Patent**
  A published patent. Do not include as yet unpublished patent applications.

- **Artefact**
  An artist's artefact or work product.

- **Show/Exhibition**
  An artist's exhibition or site specific performance-based deposit.

- **Composition**
  A musical composition.

- **Performance**
  Performance of a musical event.

You are both a depositor and an editor of this item.

- You have not uploaded any documents. While this is not essential, it is strongly recommended.

For work being deposited by its own author: In self-archiving this collection of files and associated bibliographic metadata, I grant Enlighten the right to store them and to make them permanently available publicly for free on-line. I declare that this material is my own intellectual property and I understand that Enlighten does not assume any responsibility if there is any breach of copyright in distributing these files or metadata. (All authors are urged to prominently assert their copyright on the title page of their work.)

For work being deposited by someone other than its author: I hereby declare that the collection of files and associated bibliographic metadata that I am archiving at Enlighten is in the public domain. If this is not the case, I accept full responsibility for any breach of copyright that distributing these files or metadata may entail.

Clicking on the deposit button indicates your agreement to these terms.

Other Features – Request Paper

• **Request Paper**
  Option to have a request paper button for material without full text which will enable users to ask for it
  Currently not implemented at Glasgow

• **Alternate Languages Supported**
  Multiple languages can be configured in EPrints e.g. English and French
Extending EPrints – Plug-ins

- EPrints 3 uses plug-ins to extend its functionality
- Many of these are written by the user community, for example:
  - CoverPDF which adds a PDF coversheet on demand
  - SNEEP – Social Networking extensions and tags
