(с 5 по 11) являются профильными. Более 100 элективных курсов реализуются в гимназии.

Оценка эффективности инвестиций в образование по доходному методу для личного ЧК включает достижения на олимпиадах (призеры и победители) и зачисление на курсы при вузах, летние школы, в вузы страны.

Эффективность ЧК для ОУ – доля обучающихся ОУ с ярко выраженной учебной мотивацией, участие гимназистов в интеллектуальных мероприятиях разных уровней, доля участников и призеров интеллектуальных мероприятий разных уровней. А как интегральный показатель – место в рейтинге лучших школы России. Гимназия занимает там достойное место, а по сравнению с ОО города находится в тройке лидеров.

В итоге можно сделать вывод, что в гимназии 35 эффективность инвестиций в образование достаточно высока.

Abstract: the article gives a comparative description of higher education in China and Russia.

Keywords: higher education, common features of higher education in China and Russia, the distinctive features of higher education in China and Russia.
**Annotation:** в статье дана сравнительная характеристика высшего образования в странах Китай и Россия.

**Key Words:** высшее образование, общие черты высшего образования в Китае и России, отличительные черты высшего образования в Китае и России.

In the economic globalization of today’s World, Education in the countries of the economic, political and cultural development played a crucial role. Even called the countries between the economies of the competition is the talent competition, talent competition is the basis in fact is the education competition.

China currently put higher education on an unprecedented status, the Chinese government put the higher education pendulum in priority development of strategic position, and accordingly developed a series of strategic decisions. So «facing the modernization, facing the world, facing the future» has become China’s higher education development direction. The relevant Department also provided Policy Guidelines for the education of construction and reform.

Russia is one of the education Advanced, the technology strength is very strong in the country, especially higher education, is the world’s most powerful higher education system. In the former Soviet Union and post-Soviet Russia a total of 16 scientist respectively in physics, chemistry, Economics, literature, physiology or medicine, and peace prizes get through the Nobel Prize, which prize for physics aspect of the award-winning number the most. Russian higher education level in the world the top of every million people in the University students after the United States, Canada flexor ranks third, the national level of education is generally very high. Russia is also working on education reform, the government is also increasing year by year investment in education, accelerate with the world of the education system integration process.

Chinese old saying «There is no two same leaves in the world». Due to different national conditions of China and Russia, so the situation is different in higher education, with the educational transition between the two countries in the field of higher education the situation is different, each also has its own advantages and disadvantages.

Higher education institutional comparison.

China’s implementation of the higher education institutions of University, College and College. Universities have teaching, scientific research and social services three functions.

The Russian higher vocational education there are five, not exactly vocational education, basic vocational education, complete higher vocational education, post-higher vocational education and supplementary education.
Government and University relations of China and Russia.

In government and school relations, although the two governments are passing legislation and providing funding and other ways and means for education reform and development plays a key decisive role and influence, but overall, the Chinese government on schools and the education of management interventions has become more indirect and macro. Many of the rights has been put down to the school, and gradually establish a higher education is «talent education and non-compulsory education» concept. While this concept has been noticed. This is also today's International Education one of the trends. It turns out that the Government of the tube, the more the finer, and often will make the school lack of vitality and competitiveness, is not conducive to education and schools are Autonomous self-reliant health development.

While Russia some have qualifications and fame of the University since the long-term by the government directly to the package lack of vitality and power. This should be the Russian government and the University should be considered a problem. In addition, China’s education reform, the government constantly put the right school, intensive practice is also worth of Russian learning and attention.

Chinese and Russian teaching methods of the effects.

In the teaching mode effect on the Russian many practices are worth China to study and draw. The Russian teachers of the Universal movement of heuristic teaching methods and audio-visual equipment to mobilize the students enthusiasm and attention, classroom atmosphere is very good. And often arrange students in the classroom speech and debate, effectively cultivate students ‘ divergent, creative thinking, these are well worth the China study and learning.

This is not only a teaching method and means the problem is more one of how to make students active learning atmosphere of the problem.

China and the Russian schools efficiency.

In running the efficiency and effectiveness of the Russian University of some efficient phenomenon of the foot has been the cause of China in recent years, the emergence of the combined institutions to expand the scale it is often difficult to the efficiency of the fact that for reflection.

Expand the size of the school is not necessarily will improve efficiency and effectiveness, on the contrary often also cause huge friction. School for doctors accurate level positioning, effective internal potential, and constantly improve the unit efficiency should be to improve the running efficiency of the basic direction.

In Russia, from the teaching perspective, the school day way is its educational efficiency and effectiveness of higher an important aspect. Day system effective to add staff and the school Dormitory of the flexibility and utilization of the campus as if there is no holidays. Full-time, on-the-job, Adult Education and other types of
students each select their home, people constantly, to achieve high efficiency.
These practices are very worthy of the Chinese side for dressy and learning.

Since Russia and China to different environmental, lifestyle and social history of the process, so Russia and China since ancient times the formation of two kinds of meaning and different forms of cultural patterns. On higher education, only the combination of the basic national conditions, follow the which found the law and learn from others the advantages to find the most suitable development path and direction.
