Аннотация: В статье рассматривается интеграция современной языковой модели ChatGPT в практические занятия по преподаванию грамматики английского языка. В этой статье обсуждаются потенциальные преимущества включения ChatGPT в процесс обучения грамматике английского языка, а также дается представление о его практическом применении, включая облегчение разговорной практики, предоставление мгновенной обратной связи и продвижение интерактивного опыта изучения языка.

Ключевые слова: грамматика английского языка, ChatGPT, искусственный интеллект, развитие грамматических навыков, интерактивное обучение.

Using ChatGPT in practical classes for learning English grammar

Abstract: The article discusses the integration of the modern ChatGPT language model into practical classes on teaching English grammar. This article discusses the potential benefits of incorporating ChatGPT into English grammar teaching and provides insight into its practical applications, including facilitating speaking practice, providing instant feedback, and promoting an interactive language learning experience.

Keywords: English grammar, ChatGPT, artificial intelligence, development of grammatical skills, interactive learning.

In an era where technology is constantly influencing the way we learn and communicate, the role of artificial intelligence (AI) in education is becoming increasingly prominent. One such application of AI in education is ChatGPT, a language generation model that can simulate human conversation. Using this powerful tool, teachers can design hands-on and interactive practice sessions for teaching English grammar in ways that engage students and promote deeper understanding of the subject. [1, p. 81].

GPT chat models are pre-trained on large amounts of text data to understand language and generate contextually appropriate responses [2, p. 71]. The technology can be used for a wide range of applications, including customer service, virtual assistants, and language translation.

In the context of pedagogy, ChatGPT refers to the use of generative pre-trained transformer models in educational settings [3, p. 302]. These models can be used to support and improve various aspects of teaching and learning.

Incorporating ChatGPT into English grammar practice sessions offers a dynamic approach to language learning. By interacting with an AI-driven language model, students can participate in real-time conversations and receive instant feedback on their grammar usage. [4, p. 68]. This interactivity creates a more immersive learning environment by allowing students to practice and apply grammar concepts in a practical and fun way.

To successfully implement the use of ChatGPT in a practical English grammar lesson, it is necessary to create a structured and interactive plan. The following presents the necessary steps for implementation [6, p. 28]:

Step 1: Define learning objectives

It is necessary to start by defining the specific learning objectives of the practical lesson. These goals may include understanding the basic rules of grammar, identifying and correcting common grammatical errors, and applying grammatical concepts in writing and speaking.

Step 2. Select the topic of the practical lesson

You must choose a specific grammar topic to focus on in the practice session, such as tenses, subject-verb agreement, punctuation, or sentence structure.

Step 3: Create Live Chat Scripts

ChatGPT can be used to create interactive chat scripts that describe real-life situations in which a selected grammatical topic is relevant. To teach the past tense, you can imitate a conversation between two friends discussing their weekend activities. The chat interface can encourage students to identify the correct past tense forms depending on the context of the conversation.

Next, we will look at a specific example of using ChatGPT in a practical lesson on learning English grammar. For example, we will choose “Learning the basics of using Present Simple using ChatGPT” as the topic of the practical lesson. The purpose of the practical lesson is to study the basics of using the Present Simple in English and reinforce grammatical rules through exercises.

Present Simple Theory Review

You can use various commands to work with ChatGPT. Thus, using the command “*Present Simple - definition of tense, form of tense (affirmative, negative, interrogative), cases of use, tense markers*” allows you to demonstrate and explain to students the basics and features of using Present Simple, tense form, cases of use and markers time. To demonstrate specific examples with each use case, use the “*Give me 3 examples for each use case*” command in ChatGPT.

If we want to demonstrate a clear difference in the use of one tense and another, then using the command “*The differences of Present Simple and Present Continuous*” allows us to obtain all the necessary theory with examples.

Application of theory and practice

To put the acquired knowledge into practice, you can use commands such as:

- *“Make exercises on verb form of Present Simple based on usage cases”* - create exercises for working out Present Simple tense based on usage cases.

- *“Give me a text with errors in the use of Present Simple”* - provide students with a text with errors in the use of Present Simple for the purpose of analyzing and correcting errors.

- *“Make an exercise on the differences between the use of Present Simple and Present Continuous tenses”* – create exercises on the differences in the use of different tenses.

- *“Make an exercise for choosing the Present Simple or Present Continuous tense”* – create exercises for choosing the correct tense.

Implementation of the learned theory into speech

To learn grammar more effectively, you need to use it in speech. Thus, using the command *“Make a speaking activity based on Present Simple”* or *“Make a speaking activity based on Present Simple and Present Continuous”* you can create interactive exercises aimed at developing speaking based on a specific tense of the English language.

Based on the examples, we can conclude that ChatGPT is an effective tool in the practice of English grammar [5, p. 303]:

- **Conversation practice:** ChatGPT can be used to simulate real-life conversations in English, allowing students to practice using grammar in a practical context.

- **Error Correction:** ChatGPT can provide immediate feedback on students' grammatical errors, helping them learn from their mistakes in real time.

- **Vocabulary Expansion:** ChatGPT can introduce new vocabulary words and provide examples of their grammatically correct use.

- **Contextual learning:** ChatGPT can provide examples of how grammar rules apply in different contexts, helping students understand the nuances of English grammar.

- **Interactive learning:** ChatGPT can engage students in dialogue, encouraging them to respond and put their grammar knowledge into practice.

Thus, it can be concluded that the implementation of ChatGPT in practical English grammar classes has the potential to revolutionize language learning by offering increased interactivity, personalized learning experiences and practical application of grammar concepts. Using the power of ChatGPT, hands-on English grammar learning can be revolutionized by empowering students to engage with language in innovative and meaningful ways.
